

### Your Rx for RCRA hazardous waste compliance.

What does the EPA's Resource Conservation and Recovery Act (RCRA) mean for your facility? How have these regulations changed or expanded? Are your current methods for handling hazardous waste in compliance?

Let our Sustainable Pharmacy™ experts help you apply the EPA's definitions of hazardous waste to your current pharmaceutical waste management practices and guide you to better, more efficient practices.

#### On-Site Risk Assessment at a Glance

This tool includes:

- A 90-minute seminar for your designated managers.
- A structured evaluation of your facility's current pharmaceutical waste practices within key departments, including pharmacy, nursing and environmental services.
- A review of your facility's status as a hazardous waste generator and your current pharmaceutical waste transport and treatment processes.

#### A Multi-Step Analysis

Our Sustainable Pharmacy™ experts are registered pharmacists. They understand the complexities in performing a pharmaceutical waste assessment. And, they will conduct a systematic and thorough evaluation of the management and handling of pharmaceutical waste within your facility.

When their examination is complete, they'll provide you with specific, cost-effective recommendations for complying with federal and state pharmaceutical waste regulations. You'll receive guidance that generates best practices, helping you meet your environmental goals.
