Bloodborne Pathogens Safety Training

Teaching Employees How To Safely Handle Medical Waste

As volumes of medical waste increase and government regulation of its disposal tightens, healthcare facilities like yours need tools to train and protect healthcare staff, create a safer working environment, and avoid costly liability or non-compliance issues in the future.

As North America's leading environmental services company, Waste Management develops cost-effective programs to help healthcare organizations like yours minimize risk while furthering the goal of sustainability.

Our Bloodborne Pathogens Safety Training and Reference Manual is a case in point. This indexed manual guides your staff through OSHA's stringent regulatory requirements for handling medical waste. It covers many healthcare-specific best practices and guides you in making safety a priority for your employees, in every part of your facility.

Bloodborne Pathogens Safety Training and Reference Manual

An essential guide to complying with OSHA regulations, the Waste Management Bloodborne Pathogens Safety Training and Reference Manual includes detailed information in the following areas:

Contact information for state regulators

Includes name, title, telephone number, postal address and website address.

Bloodborne Pathogens Standards

The Manual provides extensive coverage of bloodborne pathogens for use in training healthcare workers in exposure control and prevention, effective work practices, and recordkeeping.

Hazard communication

What should you know about dealing with hazardous substances? How should you design a hazard communication program for employees?

Personal protective equipment

What equipment is needed, and who pays for it? How must it be maintained?

Electrical safety

Get detailed information about electrical hazards and how to prevent electric shock or other injuries resulting from direct or indirect electrical contact.

Standards for means of egress

This section covers the minimum requirements for exit routes that enable employees to evacuate the workplace safely during an emergency.

Fire safety action plan

The Manual provides a detailed form that allows you to customize a fire emergency action plan in keeping with OSHA requirements.

Recording and reporting, including form standards

All employers must comply with OSHA's requirements for recordkeeping and reporting occupational injuries and illnesses in the workplace. Find out what you need to know.

Commonly used forms

Included are the forms you will need as part of your written plan for your facility.
